ANNEX - A

Transmission lines are constructed in such a manner that required minimum electrical clearances with respect to ground & buildings etc. as stipulated under Indian Electricity Rules and CEA's Regulations on Safety Requirements are maintained.

Further, the EHV/UHV transmission lines are designed & constructed so as to also keep the electric & magnetic fields within limits as per International practices & ICNIRP (International Commission on Non-Ionizing Radiation Protection) guidelines. It may be noted that the guidelines regarding limiting exposure to electric & magnetic fields have been prepared by ICNIRP after assessment of studies on direct & indirect effects, review of current knowledge & scientific literature and examining results of various epidemiological & biological studies/data.

It may also be mentioned that various studies carried out in this field infer that there is no conclusive and convincing evidence that the low frequency EMF originated from the high voltage transmission line is a cause for health effects in humans.

In view of the above, no formal training or awareness programs, as such, are required.
